We congratulate for having bought this top-quality espresso machine and thank you for choosing Saeco.
Before operating the machine, we recommend to read the following instructions thoroughly which explain how to use, clean and maintain the machine.
The warning triangle shows all important safety indications to ensure the user’s safety. The non-observance of said instructions may cause serious injuries!

The first cover page of the manual shows figures relevant to the text. Thus, keep it open while reading the instructions.

How to use the instructions

These instructions cannot anticipate every possible use of the machine. For further information or questions concerning specific situations or problems, please contact the local dealer or manufacturer directly.

**Accessories (included in the machine price)**

- Measuring spoon
- Central unit key
- Cleaning brush
- Water hardness detecting strips

The manufacturer reserves the right to make improvements to the appliance due to technological advancement.
**SAFETY PRECAUTIONS**

---

**Danger!**
Electric voltage may cause death. Electrical parts should never be in contact with water. Danger of short-circuit.

Overheated steam and hot water may cause burns! Do not direct steam or water jet towards the body; furthermore, great attention must be given when touching either the dispensing tube or the heating plate: danger of burns!

This machine must be used exclusively for the purpose it has been manufactured.

This machine has been manufactured for domestic use only. Do not make technical changes; any improper use is forbidden due to the risks which might occur.

**Indications**
The machine shall only be used by adults and properly instructed persons.

**Voltage**
Never touch parts under current! They might cause electric shocks, serious injuries or death. The automatic coffee machine must be connected to the power supply. Voltage must correspond to the voltage shown on the appliance rating plate.

**Power cord**
Never operate a machine with a defective power cord. Replace defective power cords and plugs, contacting authorised personnel. Do not operate the machine near sharp edges or over hot parts, and protect it from oil.

Do not shift or move the appliance by pulling on its power cord. Do not unplug the machine by pulling the power cord and never touch the cord with wet hands. Make sure the power cord does not hang from tables or shelves.

**Keep children away**
Do not allow children to play with the appliance. Children are not aware of the potential danger of electric appliances.

---

**Positioning**
Place the automatic coffee machine in a safe place, where nobody can turn it upside down or be hurt. Hot water or overheated steam might escape from the machine: danger of burns!

Never use the coffee machine outdoors. Do not place the machine on hot surfaces or in the proximity of open flames to prevent the case from melting and to avoid other damage.

**Danger of burns**
Do not direct the overheated steam or hot water jet towards you or other people. Do not touch hot surfaces, such as the heating plate. Always use the handles or knobs. Touch spouts only if the heat protectors have been fitted on.

**Protection of the hands**
Never touch the central unit with fingers when brewing coffee: danger of injuries! While operating, the central unit lifts and may thus cause fingers to get trapped in the machine.

**Cleaning**
Before cleaning the machine, make sure to switch off all buttons and unplug the machine. Furthermore, wait until the machine cools down. Never place the machine into water. Do not tamper with the inner parts of the machine and never open the machine.

**Storage of the machine**
When the machine is not being used, turn it off and unplug it. Keep it in a dry place, far from the reach of children.

**Repair/Maintenance**
In case of defect, fault or suspected damage following a fall, unplug the machine immediately. Never use a defective appliance. Only skilled personnel are authorised to carry out repairs. The manufacturer declines any liability whatsoever, should repairs fail to be carried out by authorised personnel.
Should an extension cord be used, check its perfect condition. The extension cord must have a minimum section of 1 mm² and must be supplied with a three-pole plug/socket.

Starting and use

Danger! Electric voltage may cause death. Electrical parts should never be in contact with water: danger of short-circuit. Overheated steam and hot water may cause burns! Do not direct steam or water jet towards the body; furthermore, great attention must be given when touching either the dispensing tube or the heating plate: danger of burns! For your own safety as well as for other people safety, keep to the safety precautions described (see pages 26/27).

Never use the machine without water and coffee beans.

Remove measuring spoon, brush and the central unit key from the coffee grounds container (1) and keep them within reach.

Unwind the power cord (24) from the rear side of the machine.

Power supply connection

Warning: electric current may cause death! Always keep to safety indications.

The coffee machine must be connected to an adequate socket. Voltage must suit to the voltage specified on the appliance rating plate.

Never use defective power cords and plugs; defective power cords and plugs must be replaced by authorised personnel.

Unpacking/Installation

Standard packing is strong enough to protect the machine during mail shipping. Keep this package to return the machine to the manufacturer, should it be necessary.

Before installing the machine, follow the following safety precautions:

Position the machine in a safe place.
Do not allow children to play with the machine.
Make sure the machine is not placed nearby hot surfaces or open flames.
Whenever possible, always use the machine with the swivel (21). Thus, when installing the machine, make sure to rest it directly on this support by inserting it into the slot on the lower side of the machine.

Now the machine is ready to be connected.

The coffee machine must be connected to an adequate socket.
Voltage must suit to the voltage specified on the appliance rating plate.

Never use the machine without water and coffee beans.

Remove measuring spoon, brush and the central unit key from the coffee grounds container (11) and keep them within reach.

Unwind the power cord (24) from the rear side of the machine.

Coffee beans container (11) is attached with two screws. Remove the cover (12) and fill it with coffee beans (approx. 300 g), then replace the cover. Adjust grinding by means of the grind adjust lever (13), positioning it on point "5" of the scale.

Control panel description

Central unit warning light
On: the central unit is not correctly mounted. Blinking: the central unit is missing
Descaling warning light
On: descaling required
Coffee grounds container warning light
On: the container is full. Blinking: the container has not been properly positioned
Coffee bean container warning light
On: the coffee grinder is jammed
Water tank warning light
On: the tank is empty. Blinking: pump is not functioning properly, it must be drained

Temperature warning light
On: working temperature too low
Blinking: excessive working temperature, carry out drainage

Main switch
1 or 2 cups of regular coffee
1 or 2 cups of espresso coffee
1 or 2 cups of tall coffee
Pre-ground coffee selection button
Heating plate selection button
Steam selection button

Central unit warning light
On: the central unit is not correctly mounted. Blinking: the central unit is missing

Descaling warning light
On: descaling required

Temperature warning light
On: working temperature too low
Blinking: excessive working temperature, carry out drainage

Main switch
1 or 2 cups of regular coffee
1 or 2 cups of espresso coffee
1 or 2 cups of tall coffee
Pre-ground coffee selection button
Heating plate selection button
Steam selection button

Temperature warning light
On: working temperature too low
Blinking: excessive working temperature, carry out drainage

Main switch
1 or 2 cups of regular coffee
1 or 2 cups of espresso coffee
1 or 2 cups of tall coffee
Pre-ground coffee selection button
Heating plate selection button
Steam selection button
**DRAINAGE**

Direct the steam/hot water dispensing tube (5) over the drip tray (2). Place a cup or another suitable container under the dispensing tube, then turn the steam/hot water selection knob (6) counterclockwise. The pump automatically starts. Wait until a regular water jet is obtained, then close the knob. The machine is now drained.

**Important:**
- It is advisable to drain the machine before the first start, after a prolonged use or whenever the water tank has been completely emptied.
- Furthermore, should temperature or water tank warning lights blink, drain the machine.
- The machine is ready for use as soon as the temperature light is on.

**Programming the machine**

27 To enter the programming mode, turn the machine off with the main switch. Press steam, espresso coffee and the main switch at the same time. Release the buttons.

**Water hardness adjustment**

In order to adjust the water hardness, it is necessary to test the water using the strip supplied with the machine.

Dip the strip into the water for a second, shake off excess water gently, wait approx. 1 minute and read the result.

- As soon as value 4 has been reached, the counter resets and restarts from 1.
- As far as scale values are concerned, see page 37, points 45-48.

**Pre-Infusion**

The regular coffee button activates or deactivates the dispensing of coffee, as shown by the lit button.

As soon as the coffee has been moistened, the pump stops for two seconds. Then the brewing cycle continues.

**Coffee dosage adjustment**

28 Adjustment lever (19) allows the selection of the coffee quantity, from 6 to 9 grams. Open the service door (15) and place the adjustment lever (19) in the desired position.

Note: Opening the service door causes the machine to stop, automatically. Close the door to restart the machine.

Coffee dosage must not be changed frequently, otherwise the coffee dispenser may get damaged, thus spoiling the quality of coffee.

**Recommendations**

- If the machine has not been used for a prolonged period, it is advisable for hygienic reasons to run a rinse cycle through the machine.
- Preheating cups: Cups may be preheated by placing them on the heating plate.
- Temperature warning light: When connecting the machine, the green warning light will light permanently after approx. two minutes, showing the machine is ready to be used.
- Empty coffee bean container warning light: When this led is on, the coffee grinder stops. Fill the container with coffee beans and restart the cycle.
- Empty water tank warning light: An empty water tank causes the cycle to stop automatically. Fill the tank with water. It is of the utmost importance to drain the circuit before restarting the machine.
- It is not possible to start programming without carrying out the drainage.
- When restarting the machine, make sure the red warning light is not blinking or is off.
Grind
If the coffee flows too quickly (coarse grind) or too slowly (fine grind) into the cup, adjust the coffee grinder.
Recommended grind level: position 5
Grind too coarse--adjust to a lower value (from 5 to 3)
Grind too fine--adjust to a higher value (from 5 to 7)
Adjust the grind level only when the coffee grinder is running.

Water quality
In addition to blend, grind and water temperature, the water quality is of the utmost importance for the brewing of a good coffee.
Thus, the use of a decalcifier to remove lime scale and eliminate any unpleasant taste and organic impurities is strongly recommended.
Furthermore, a decalcifier partially eliminates impurities from the water, thus protecting the machine heating system from chemical buildup and prolonging its working life.
The water tank must be emptied daily and filled with fresh water.

Brewing
Cup level adjustment
This machine allows the precise dosage of the coffee quantity, according to the cup dimension.
The cup levels have been preset at the factory according to the following values:

<table>
<thead>
<tr>
<th>Coffee Type</th>
<th>Cup Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Espresso</td>
<td>60 ml</td>
</tr>
<tr>
<td>Regular</td>
<td>125 ml</td>
</tr>
<tr>
<td>Tall</td>
<td>max. 250 ml</td>
</tr>
</tbody>
</table>

Cup level setting
Ex. espresso coffee.
When the machine is ready, press and keep pressed the espresso coffee button, and wait until the desired quantity of coffee has flowed into the cup.
Upon releasing the button, the level is automatically saved, thus always allowing to obtain the same quantity of coffee.
Use the above mentioned procedure also to change or adjust the quantity of water either for regular or tall coffee.
The quantity for two cups of coffee will be automatically adjusted according to the single cup level.

Operation time
The machine may be kept on all day long.
However, should the machine not be used for a prolonged period, it is advisable to turn it off.
Once switched on, it will be ready for use within two minutes.

Switching off the machine
Switch the machine off after the coffee cycle has been concluded.

Pre-ground coffee
Make sure to use pre-ground coffee only (medium grind).

Bean coffee
This machine grinds a portion of fresh coffee for each cup; for two cups, it grinds two portions of coffee, one after the other, thus ensuring optimum coffee quality.

Before any use, make sure the steam/hot water knob is closed.
Adjust the desired grinding degree; the recommended average value is 5.

The grinding degree must be adjusted only when the coffee grinder is operating, otherwise it may be damaged.
Place one or two preheated cups under the grill (3) under the dispenser (4).
By pressing the relevant selection button the machine will automatically dispense the selected coffee.

The coffee flow can be stopped at any moment by pressing any selection button (except those of the heating plate and steam), if, for instance, an excessive quantity of water has been selected.

Use the quantity necessary for the number of cups to be obtained.
Always remember that ground coffee ages soon, thus losing its quality.

Hot water
The hot water dispensing is separate from the coffee circuit, in order to supply hot water for tea, soup etc.

Place the glass or the cup under the steam/hot water dispenser (5), then slowly open knob (6), turning it counterclockwise.
Hot water will be automatically dispensed. As soon as dispensing is over, close knob again.

Steam
To heat milk or other drinks.

Clean the spout with a damp cloth soon after use; otherwise it might be difficult to remove milk residues.
After steam outflow, always drain the machine; otherwise the coffee brewing program automatically stops, due to excessive temperature.

If the machine is on the steam mode, the automatic coffee brewing is prevented.

Press the steam selection button, and wait until the green temperature warning light turns on.

Direct the steam/hot water dispenser (5) over the cup holder grill (3) and slightly open knob (6), turning it counterclockwise.

Wait until the remaining water has flown out of the spout. Then move the spout outwards and immerse it into the fluid to heat.

Slowly open the steam/hot water knob and heat the fluid, using a circular movement from bottom to top.

When the fluid has reached the desired temperature, close the knob and immediately clean the spout with a damp cloth.

Warning: the spout is hot, it may cause burns!

As soon as the steam/hot water dispensing is finished, position the steam/hot water dispensing tube over the cup holder grill and deactivate the steam function by pressing the steam selection button.

Then open the steam/hot water knob and drain the fluid, using a circular movement from bottom to top.

The machine is ready to brew coffee again.

Cappuccino froth
Fill a cup 1/3 with cold fresh milk, then immerse the steam/hot water dispensing tube (5) just below the milk surface. Move the cup with a circular movement to form a thick froth. Then immerse the dispensing tube deep into the milk to heat it.

Incorporated safety devices

Automatic off
Should the service door be open, the machine automatically switches off and its operation is thus prevented.

If the central unit is not mounted, only water and steam can be dispensed.

Electronic grinding time control
As soon as the coffee bean container is empty, the machine automatically stops after approx. 20 seconds.

Fill the container with coffee beans. The coffee brewing cycle can be restarted.

Electronic pump control
The machine switches off automatically as soon as the water tank is empty.

Automatic temperature adjustment
This adjustment controls the correct temperature to brew coffee and to dispense hot water and steam.

Coffee brewing is automatically interrupted should the water temperature be too low or too high (safety thermostat and overheating safety device activated).

Antigravel device
Even selected coffees may contain some impurities. The coffee grinder is fitted with an antigravel device to avoid any damage. Should gravel end up into the coffee grinder, you will hear a strong and characteristic noise. Stop the machine immediately, otherwise the protection system will stop the coffee grinder after approx. 20 seconds.

Important: Do not start the machine until the matter has been removed, otherwise the motor may be damaged.

Procedures: see page 35, points 38-42.

Cleaning/Maintenance

Cleaning
To ensure high coffee quality and a longer working life of the machine, always keep the machine clean.

Before cleaning the machine, turn off the main switch and unplug the machine.

Before cleaning the machine, wait until it cools down.

Do not immerse the machine into water or other fluids (it may be damaged).

Do not wash parts of the machine in the dishwasher.

Always handdry all parts of the machine; do not dry them in the oven or microwave oven!

Water tank/Drip tray/Coffee grounds container/Coffee dispensing unit/Coffee machine

In order to keep the dispensing area and the central unit (16) clean, it is recommended to empty the coffee grounds container (11) every day.

The water tank (8), drip tray (2), cup holder grill (3) and coffee grounds container should be washed periodically, using a non-abrasive solvent and drying them carefully.

The coffee dispenser (4) may be removed for cleaning operations. Unloose the two screws and rinse the dispensing tubes thoroughly with hot water.

From time to time, clean the machine casing with a damp cloth and dry it.

Clean the pre-ground coffee container (14) with the aid of the brush supplied, whenever necessary.

Central unit
Clean the central unit (16) whenever the coffee bean container has been refilled, or at least once or twice a week.

Switch off the machine by pressing the main switch and open the service door (15).

Remove the coffee grounds container (1).

Remove the central unit (16) by holding it by the handle and pressing the "PRESS" key.

Wash the central unit with hot water. Make sure there are no coffee residues on the two chrome-steel filters.

Dry it thoroughly.
Descaling

36

- Remove the coffee drawer (20) and clean it, using a non-abrasive soap.

37

- The coffee ground container again. Then close the service door. Insert the coffee

38

- Clean the service area thoroughly with a damp cloth and reinsert the coffee ground container again.

39

- When replacing the central unit, do not press the "PRESS" key (it may cause damages to the machine!)

40

- Warning: If the central unit is not correctly inserted, the warning light switches on, thus preventing the machine from brewing coffee.

41

- Coffee grinder

42

- Never fill the coffee grinder with water; it may damage the machine!

43

- Now remove the grind ring from the machine, pulling it slightly upwards.

44

- With the aid of a brush or a narrow vacuum hose, clean both the coffee grinder box and the grind ring support. Make sure the position of the grind ring does not shift.

45

- To reassemble the coffee grinder, carry out the reverse sequence, making sure the adjustment ring has not been shifted during cleaning. If that is the case, turn the adjustment ring to make the blue mark coincide with one of the three notches. Assemble the grinding ring support and make sure the blue marks coincide.

46

- Turn the adjustment ring clockwise to make the grind level coincide.

47

- Fit the adjustment lever on the ring, making sure the grind level is on position 6.

48

- Descaling

49

- Descaling is necessary to remove lime scale from surfaces and holes, thus ensuring a perfect operation of valves, heating controls and other important parts.

50

- According to water hardness, the machine must be descaled every 3-4 months, according to the water hardness degree. A more frequent descaling is recommended wherever the water hardness degree is very high.

51

- This machine is supplied with a particular warning light to make this operation easier. Descaling must be carried out at the latest when this warning light switches on. Furthermore, said warning light may be adjusted according to the water hardness degree.

52

- The machine has been adjusted at the factory to a certain value, which causes the warning light to switch on after approx. 150 l water passage. The water hardness value may be changed, if necessary, following the instructions shown on page 30.

53

- The following adjustments are possible:

54

- Hardness index 1: high water hardness, exceeding 29°H (14°dH), approx. 80 l water passage.

55

- Hardness index 2: medium water hardness, approx. 20°H (7°dH), approx. 150 l water passage.

56

- Hardness index 3: soft water, approx. 12-21°H (4°dH), approx. 300 l water passage.

57

- Hardness index 4: very soft water, less than 10°H (3°dH), more than 500 l of water passage.

58

- In case of hard water, a filter should be used both to improve the coffee quality and to protect the machine, thus reducing the descaling frequency.

59

- Descaling must be carried out as follows:

60

- Never use vinegar to clean the machine; it might damage it.

61

- There are two ways to carry out the descaling of the machine:

62

- Automatic descaling

63

- Turn the machine off.

64

- Pour a descaling product into the water tank (according to the instructions on the descaling solution package).

65

- Switch the machine on to the programming mode. Place a large container under the steam/hot water dispensing tube (5) and open the steam/hot water knob (8) slowly, turning it counterclockwise.

66

- Turn on the machine by pressing the main switch (3) and let the descaling product flow out of the dispensing tube for approx. 1 min. Close the knob again.

67

- Turn off the machine with the main switch and let the solution take effect for approx. 5 minutes. Repeat this procedure two or three times, to allow all of the descaling product in the water tank to flow out of the dispensing tube.

68

- As soon as descaling has been carried out, rinse the tank (8) thoroughly and fill it with fresh water. Switch on the machine and let fresh water (approx. 2 l) flow out of the steam/hot water dispensing tube in order to rinse away residue.

69

- The machine is now ready for operation.

70

- When the machine is on, the warning light switches off automatically, by pressing the steam selection button for at least 5 seconds.
**Important**

A periodic descaling avoids expensive repairs. The machine warranty does not cover damages occurring as a result of the non-observance of descaling procedures, improper use and failure to comply with and follow any other instructions contained herein. Maintain the manufacturer’s adjustment if the water hardness degree is not known.

**Storage of the machine**

Switch off the machine and unplug it if the machine will not be used for long periods of time.

Keep the machine in a dry place, far from the reach of children. Should the machine not be used for a long period, protect it from dust and dirt.

**Maintenance**

Periodically check the machine and clean it in accordance to the instructions.

**Disposal**

Machines which are no longer operational should immediately be made non serviceable, by cutting the power cord. Machines should be delivered to a public disposal centre.

---

### Troubleshooting

**In case of failure, fault or suspected damage following a fall, unplug the machine immediately.**

To fix problems, follow the instructions in the table below. Otherwise contact an authorised technician.

Only skilled personnel are authorised to service and repair the machine. The user might incur serious injuries if repairs are not properly carried out. The manufacturer declines any liability whatsoever, should repair fail to be carried out according to the instructions contained in this manual. Furthermore in these cases, warranty rights cannot be honored.

**Important**

A periodic descaling avoids expensive repairs. The machine warranty does not cover damages occurring as a result of the non-observance of descaling procedures, improper use and failure to comply with and follow any other instructions contained herein. Maintain the manufacturer’s adjustment if the water hardness degree is not known.

**Storage of the machine**

Switch off the machine and unplug it if the machine will not be used for long periods of time.

Keep the machine in a dry place, far from the reach of children. Should the machine not be used for a long period, protect it from dust and dirt.

**Maintenance**

Periodically check the machine and clean it in accordance to the instructions.

**Disposal**

Machines which are no longer operational should immediately be made non serviceable, by cutting the power cord. Machines should be delivered to a public disposal centre.
